Easy Locator IXM

The IXM, a new option to the Easy Locator System

IXM is a new alternative to the monitor EXM for the Easy Locator. With the IXM it's possible to create a screen capture of the collected data in a .jpg image format and upload it to your computer for printing. The IXM is also available in a plus version with the transreflective screen (IXM+). New Easy Locators can be ordered directly with the IXM / IXM+ or previously purchased EXM / EXM+ can be upgraded.
